Introductory Statement on AI Use and Data Handling

Our organisation recognises the transformative potential of Artificial Intelligence (AI) to enhance our services, improve our outreach, and better serve our members and supporters. At the same time, we are committed to ensuring that AI technologies are deployed responsibly and ethically, with a clear focus on protecting the rights and interests of all individuals whose data we may handle. This commitment applies to everyone in our organisation, including staff, trustees, and volunteers.

1 People

We will empower our team, whether paid staff, trustees, or volunteers, to understand and responsibly use AI tools. This involves providing training on relevant laws, ethical frameworks, and best practices so that those handling data or interacting with AI systems can do so with confidence and integrity. We will also ensure that our AI initiatives maintain a member and supporter focused lens, grounding our decisions in the needs and well-being of the community we serve.

2 Processes

Our processes for implementing AI will be designed to uphold transparency and accountability. This means we will establish clear guidelines on how AI tools are selected, tested, and monitored. We will strive to document every stage of the AI lifecycle, from initial development or procurement to ongoing evaluation, ensuring that the outcomes align with our charitable goals and ethical standards.

3 Technology

We commit to adopting AI technologies that align with industry best practices and regulatory standards. Our approach will prioritise reliability, security, and respect for individual rights. Whenever possible, we will use open and auditable systems, so that our use of AI is transparent and verifiable, fostering trust both within our organisation and among our wider membership.

4 Data

Responsible data handling lies at the heart of ethical AI use. We will only collect and process data that is strictly necessary for our mission, doing so lawfully, fairly, and transparently. Where possible, data will be anonymised or pseudonymised to protect personal information. We will maintain robust safeguards to prevent unauthorised access, loss, or misuse, and ensure compliance with all relevant data protection legislation.

5 Governance and Ethics

We understand that AI systems can present complex ethical challenges. Consequently, we will establish clear governance structures, such as ethics committees or oversight bodies, to review AI projects and initiatives. These structures will help ensure that any use of AI reflects our organisation's values, respects human dignity, and complies with applicable standards of fairness, accountability, and transparency.

6 Privacy and Data Protection

Privacy is a fundamental right, and we are dedicated to preserving it throughout our AI initiatives. We will comply with all applicable data protection laws, including the UK General Data Protection Regulation (UK GDPR), and adhere to best practice principles such as data minimisation, purpose limitation, and subject access rights. Members and supporters will always have the ability to access information about how their data is used and, where appropriate, to withdraw consent.

Through this statement, our organisation affirms its dedication to using AI responsibly, safeguarding personal data, and building trust with everyone we serve. Our aim is not only to innovate but to do so in a manner that honours our charitable objectives, protects the rights and dignity of our stakeholders, and fosters long-term confidence in our work.
